PROJECTS

AI Proposal Evaluation System (R&D) | Python, FastAPI, Scikit-Learn, SHAP, Generative AI

- Built a full-stack AI evaluation platform using **FastAPI** (backend) and Streamlit (frontend) to analyze **300+ R&D proposal PDFs** and automate funding recommendations.
- Designed an ML ensemble scoring model achieving **91.3% prediction accuracy** with uncertainty estimation and confidence intervals to improve decision reliability.
- Integrated Generative AI for automated report generation, producing **instant evaluation summaries (under 5 seconds)** while storing structured data in SQLite.

Smart Storage Optimization System | Python, Flask, ML, Pandas, SQLite

- Built an AI-powered storage optimization system **analyzing 10,000+ data records**, improving storage utilization by **30–40%** through intelligent data allocation.
- Developed a **machine learning model (90%+ accuracy)** to classify frequently vs infrequently accessed data, enabling efficient caching and reducing retrieval latency by **25%**.
- Designed a scalable Flask dashboard handling **50,000+ records**, with backend optimization improving API response time from **3s to 1.5s**.

SafeSphere.AI | HTML, CSS, JS, Redis, MongoDB, AI Moderation APIs

- Developed a real-time AI moderation engine capable of **analyzing 10,000+ content samples** (text + images) for toxicity and unsafe content.
- **Achieved 95%+ detection accuracy** using integrated Bytez.js and Sightengine APIs for multi-modal moderation.
- **Reduced moderation latency by 35%** using Redis-based asynchronous processing, while designing scalable MongoDB storage for **50,000+ moderation logs**.

CERTIFICATIONS

- **Generative AI Using IBM Watsonx (IBM)**
- **Oracle Cloud Infrastructure 2025 Certified Data Science Professional**
